Document Body

Hello,

Here is our database pull for sites in California that are believed to score above 28.5 (it contains **221 sites**). The list may not be complete and may contain errors. The CERCLIS database that we use for tracking purposes has over **5,400 California sites** listed. The database does not include site scores, so we used search criteria based on site actions that imply the site scored above 28.5. **We did not pull all of the site files to verify site status.** I would expect that there are at least a few errors. Additionally, several of the sites have not been evaluated in more that 20 years. Site conditions have most likely changed...

The data pull includes California sites that are on federal land or under federal authority for evaluation and/or remediation.

A break down of the site status for the 221 sites is as follows:

- 23 are coded as "HRS On-going" or "HRS Start Needed"

- 2 are coded as "Assess Complete - Decision Needed"
- 89 are coded as "Other Cleanup Activity: State-Lead"
- 32 are coded as "deferred to RCRA"
- 16 are coded as "Other Cleanup Activity: Fed Fac-Lead"
- 2 are coded as "Other Cleanup Activity: Private Party-Lead"
- 35 are coded as "Site Reassessment On-going" or "Site Reassessment Start Needed"
- 18 are coded as having on-going or needing "various" assessments (e.g. PA; SI; ESI; etc.) in the CERCLA process
- 2 are coded as "Referred to Removal - Further Assess Needed"
- 2 are coded as "Addressed as Part of Another non-NPL Site"

Hope this is helpful,
Dawn
